

Haofeng Ma

Undergraduate Researcher

✉ smyhm1@nottingham.edu.cn 📍 Ningbo, China

Profile

Undergraduate student working on deep learning and time-series forecasting, with broader interests in AI agents, large language models, and quantitative finance.

Education

BSc	University of Nottingham Ningbo China , Mathematics and Applied Mathematics	Ningbo, China
	• Average mark: 74/100 · GPA: 4.0	Sept 2024 – June 2028
	• Relevant coursework: Core Mathematics, Applied Mathematics, Algebra, Probability and Statistics, Mathematical Software, and Foundations of Physics	

Research Projects

PHAT: Modeling Period Heterogeneity for Multivariate Time Series Forecasting

ICLR 2026 Poster · Third author

- Models periodicity as an inductive bias for deep learning in multivariate time-series forecasting.
- Develops temporal feature extraction and channel interaction mechanisms tailored to heterogeneous periodic patterns across variables.
- Conducted in collaboration with the School of Artificial Intelligence and Data Science, University of Science and Technology of China.

To See Far, Look Close: Evolutionary Forecasting for Long-term Time Series

Under review · Fourth author

- Studies the direct forecasting paradigm for long-horizon time series and introduces an evolutionary forecasting approach.
- Trains on short, higher-confidence prediction windows and progressively extrapolates in blocks at inference time.
- Conducted in collaboration with the School of Artificial Intelligence and Data Science, University of Science and Technology of China.

Skills

Programming: Python, MATLAB

Technical writing: LaTeX, academic writing in English

Research areas: Time-series forecasting, deep learning, AI agents, large language models, quantitative finance
